

Multiple Choice Questions (MCQs) on Operating Systems

1. What is the primary function of an Operating System (OS)?

- A) To run application software
- B) To manage hardware and software resources
- C) To provide internet connectivity
- D) To create documents
- **Answer:** B) To manage hardware and software resources

2. Which of the following is NOT a component of an Operating System?

- A) Kernel
- B) File System
- C) Web Browser
- D) Process Management
- **Answer:** C) Web Browser

3. What type of OS is designed for mobile devices?

- A) Desktop OS
- B) Real-Time OS
- C) Mobile OS
- D) Server OS
- **Answer:** C) Mobile OS

4. Which of the following is an example of a Real-Time Operating System (RTOS)?

- A) Windows
- B) Android
- C) QNX
- D) macOS
- **Answer:** C) QNX

5. What does the Kernel of an OS do?

- A) Manages user interface
- B) Manages hardware resources
- C) Manages file storage
- D) Manages application software
- **Answer:** B) Manages hardware resources

6. Which of the following is a function of Memory Management in an OS?

- A) Managing file permissions
- B) Allocating and deallocating memory
- C) Scheduling processes
- D) Managing device drivers
- **Answer:** B) Allocating and deallocating memory

7. What is the purpose of system calls in an OS?

- A) To manage hardware interrupts
- B) To request services from the OS
- C) To execute application software
- D) To manage user accounts

- **Answer:** B) To request services from the OS

8. Which mode provides full access to hardware for the OS?

- A) User Mode
- B) Kernel Mode
- C) Safe Mode
- D) Recovery Mode
- **Answer:** B) Kernel Mode

9. What is the role of the File System in an OS?

- A) To manage CPU scheduling
- B) To manage data storage and retrieval
- C) To manage network connections
- D) To manage user interfaces
- **Answer:** B) To manage data storage and retrieval

10. Which of the following is an example of a Desktop Operating System?

- A) iOS
- B) FreeRTOS
- C) Windows
- D) VxWorks
- **Answer:** C) Windows

11. What is the purpose of Device Management in an OS?

- A) To manage user accounts
- B) To manage file storage
- C) To coordinate input/output devices
- D) To manage memory allocation
- **Answer:** C) To coordinate input/output devices

12. Which of the following is a characteristic of Embedded System OS?

- A) General-purpose computing
- B) Highly specialized and lightweight
- C) Designed for multitasking
- D) Supports multiple users
- **Answer:** B) Highly specialized and lightweight

13. What does an interrupt do in an Operating System?

- A) It manages memory allocation
- B) It signals the CPU to perform a task
- C) It creates a new process
- D) It manages file permissions
- **Answer:** B) It signals the CPU to perform a task

14. Which of the following is a function of Security and Access Control in an OS?

- A) Managing file storage
- B) Protecting data through authentication
- C) Scheduling processes
- D) Managing device drivers
- **Answer:** B) Protecting data through authentication

15. **What is the main purpose of Networking in an OS?**

- A) To manage hardware resources
- B) To enable communication between devices
- C) To manage user interfaces
- D) To allocate memory
- **Answer:** B) To enable communication between devices
