

MCQs on DevOps and Containerization

1. What is the primary goal of DevOps?

- A) To increase the number of software developers
- B) To improve collaboration between software development and IT operations
- C) To eliminate the need for testing
- D) To create more documentation
- **Correct Answer:** B) To improve collaboration between software development and IT operations

2. Which of the following is NOT a key concept of DevOps?

- A) Collaboration
- B) Automation
- C) Isolation
- D) Continuous Delivery
- **Correct Answer:** C) Isolation

3. Which tool is commonly used for Continuous Integration/Continuous Delivery (CI/CD)?

- A) Git
- B) Docker
- C) Jenkins
- D) Ansible
- **Correct Answer:** C) Jenkins

4. What is the purpose of a Dockerfile?

- A) To run Docker containers
- B) To define how to build a Docker image
- C) To monitor container performance
- D) To manage version control
- **Correct Answer:** B) To define how to build a Docker image

5. Which of the following is a benefit of containerization?

- A) Increased application size
- B) Portability across different environments
- C) Dependency conflicts
- D) Slower application startup times
- **Correct Answer:** B) Portability across different environments

6. In the DevOps phases, which phase involves defining project goals and requirements?

- A) Development
- B) Testing
- C) Planning
- D) Release
- **Correct Answer:** C) Planning

7. What does the 'RUN' command do in a Dockerfile?

- A) It starts the container
- B) It installs dependencies and libraries

- C) It copies files into the container
- D) It defines the default command to run
- **Correct Answer:** B) It installs dependencies and libraries

8. Which of the following tools is used for monitoring and logging in the DevOps ecosystem?

- A) Git
- B) Docker
- C) Prometheus
- D) Jenkins
- **Correct Answer:** C) Prometheus

9. What is the first stage in the container life cycle?

- A) Running
- B) Start
- C) Creation
- D) Removal
- **Correct Answer:** C) Creation

10. Which command is used to build a Docker image?

- A) docker run
- B) docker create
- C) docker build
- D) docker start
- **Correct Answer:** C) docker build

These questions cover various aspects of DevOps, containerization, and Docker, providing a comprehensive assessment of the key concepts discussed in the document.

You

@gpt-4o for the given file give me as many as mcqs using your understanding

Here are additional multiple-choice questions (MCQs) based on the content of the provided document, expanding on various aspects of DevOps, containerization, and Docker:

MCQs on DevOps and Containerization

11. What does CI/CD stand for in the context of DevOps?

- A) Continuous Integration and Continuous Deployment
- B) Continuous Improvement and Continuous Delivery
- C) Continuous Integration and Continuous Delivery
- D) Continuous Inspection and Continuous Development
- **Correct Answer:** C) Continuous Integration and Continuous Delivery

12. Which of the following tools is used for configuration management in the DevOps ecosystem?

- A) Git
- B) Jenkins

- C) Ansible
- D) Docker
- **Correct Answer:** C) Ansible

13. What is the main advantage of using version control systems (VCS) like Git?

- A) They automate deployment processes
- B) They help manage source code and track changes
- C) They monitor application performance
- D) They create Docker images
- **Correct Answer:** B) They help manage source code and track changes

14. In the DevOps phases, which phase focuses on ensuring that the application is free of defects?

- A) Build
- B) Testing
- C) Release
- D) Operate
- **Correct Answer:** B) Testing

15. What is the purpose of container orchestration tools like Kubernetes?

- A) To create Docker images
- B) To automate the deployment and management of containerized applications
- C) To monitor system performance
- D) To manage version control
- **Correct Answer:** B) To automate the deployment and management of containerized applications

16. Which command is used to stop a running Docker container?

- A) docker stop
- B) docker pause
- C) docker halt
- D) docker end
- **Correct Answer:** A) docker stop

17. What is a Docker image?

- A) A running instance of a container
- B) A blueprint that defines the application and its dependencies
- C) A tool for monitoring applications
- D) A command to run containers
- **Correct Answer:** B) A blueprint that defines the application and its dependencies

18. Which of the following is a key benefit of using Docker for containerization?

- A) Increased resource consumption
- B) Faster application startup times
- C) Dependency conflicts
- D) Complex deployment processes
- **Correct Answer:** B) Faster application startup times

19. What does the 'COPY' command do in a Dockerfile?

- A) It installs dependencies

- B) It sets the working directory
- C) It copies application files into the container
- D) It defines the entry point for the application
- **Correct Answer:** C) It copies application files into the container

20. Which phase in the DevOps process involves packaging and preparing code for deployment?

- A) Build
- B) Release
- C) Deploy
- D) Operate
- **Correct Answer:** B) Release

21. What is the role of monitoring tools like Grafana in the DevOps ecosystem?

- A) To manage source code
- B) To automate testing
- C) To visualize system performance and errors
- D) To create Docker containers
- **Correct Answer:** C) To visualize system performance and errors

22. Which command is used to remove a Docker container?

- A) docker delete
- B) docker rm
- C) docker remove
- D) docker stop
- **Correct Answer:** B) docker rm

23. What is the main purpose of the 'ENTRYPOINT' command in a Dockerfile?

- A) To copy files into the container
- B) To define the default command to run when the container starts
- C) To install dependencies
- D) To set the working directory
- **Correct Answer:** B) To define the default command to run when the container starts

24. Which of the following best describes the 'Operate' phase in the DevOps process?

- A) Writing code for new features
- B) Monitoring the application to ensure it runs efficiently
- C) Packaging code for deployment
- D) Running automated tests
- **Correct Answer:** B) Monitoring the application to ensure it runs efficiently

25. What is the significance of using a CI/CD pipeline in DevOps?

- A) It eliminates the need for testing
- B) It automates the integration and deployment processes
- C) It increases manual intervention in deployments
- D) It slows down the development process
- **Correct Answer:** B) It automates the integration and deployment processes
