

MCQs on Spring Data

1. What is the primary purpose of Spring Data?

- A) To manage user interfaces
- B) To simplify data access and manipulation in Java applications
- C) To handle security in applications
- D) To provide cloud services
- **Answer: B**

2. Which of the following is NOT a key feature of Spring Data?

- A) Unified Data Access
- B) Repository Support
- C) User Interface Design
- D) Auditing
- **Answer: C**

3. What does Spring Data automatically implement for developers?

- A) User interfaces
- B) Data access methods defined in repository interfaces
- C) Security protocols
- D) Cloud storage solutions
- **Answer: B**

4. Which module of Spring Data provides support for JPA?

- A) Spring Data MongoDB
- B) Spring Data JPA
- C) Spring Data Redis
- D) Spring Data Elasticsearch
- **Answer: B**

5. What is the purpose of the @Query annotation in Spring Data?

- A) To define custom queries using JPQL or native SQL
- B) To create new entities
- C) To manage transactions
- D) To handle pagination
- **Answer: A**

6. Which of the following is a method provided by the CrudRepository interface?

- A) save()
- B) update()
- C) findAllUsers()
- D) deleteAll()
- **Answer: A**

7. What does the JpaRepository interface extend?

- A) CrudRepository and PagingAndSortingRepository
- B) CrudRepository only
- C) PagingAndSortingRepository only

- D) No other interfaces
- **Answer: A**

8. Which of the following annotations is used to track the creation date of an entity?

- A) @LastModifiedDate
- B) @CreatedDate
- C) @AuditDate
- D) @EntityDate
- **Answer: B**

9. What is the role of the service layer in a Spring Data application?

- A) To handle HTTP requests
- B) To interact with the repository layer and contain business logic
- C) To manage user sessions
- D) To configure database connections
- **Answer: B**

10. Which of the following Spring Data modules is used for working with MongoDB?

- A) Spring Data JPA
- B) Spring Data Redis
- C) Spring Data MongoDB
- D) Spring Data Cassandra
- **Answer: C**

11. What does the `findByLastName` method in a repository interface do?

- A) It saves a user by last name.
- B) It retrieves users based on their last name.
- C) It deletes users by last name.
- D) It updates users by last name.
- **Answer: B**

12. Which of the following is a benefit of using Spring Data?

- A) Increased boilerplate code
- B) Simplified data access
- C) Complex configuration
- D) Manual query writing
- **Answer: B**

13. What type of database does Spring Data Redis primarily interact with?

- A) Relational databases
- B) In-memory data structure store
- C) Document databases
- D) Graph databases
- **Answer: B**

14. Which of the following is a common method provided by the `JpaRepository` interface?

- A) `findById()`
- B) `create()`

- C) remove()
- D) update()
- **Answer: A**

15. What is the purpose of the @Entity annotation in JPA?

- A) To define a service class
- B) To mark a class as a JPA entity
- C) To create a repository
- D) To configure database properties
- **Answer: B**

16. Which of the following is NOT a module of Spring Data?

- A) Spring Data JPA
- B) Spring Data MongoDB
- C) Spring Data SQL
- D) Spring Data Redis
- **Answer: C**

17. What does the Pageable parameter in Spring Data allow you to do?

- A) Sort data
- B) Retrieve a specific page of data
- C) Create new entities
- D) Delete entities
- **Answer: B**

18. Which of the following is a valid way to define a custom query in Spring Data?

- A) Using the @CustomQuery annotation
- B) Using the @Query annotation
- C) Using the @NativeQuery annotation
- D) Using the @Find annotation
- **Answer: B**

19. What is the default behavior of Spring Data when a repository interface is created?

- A) It requires manual implementation.
- B) It automatically generates the implementation at runtime.
- C) It does not provide any methods.
- D) It only supports CRUD operations.
- **Answer: B**

20. Which of the following is a feature of Spring Data JPA?

- A) Support for NoSQL databases
- B) Automatic query generation based on method names
- C) Manual transaction management
- D) Complex configuration requirements
- **Answer: B**
